Klenasol SS02

Technical Data

Klenasol SS02 is a special solvent for use in cleaning metal surfaces by dipping or wiping, followed by rinsing with water. It is suitable for use in applications where a very high solvency power and low evaporation rate are required. Klenasol SS01 is a blend of esters based on vegetable oils and is biodegradable, will not accumulate in the soil or water or cause long term environmental problems.

Klenasol SS01 is effective for the removal of heavy greases, waxes, adhesives, asphalt, and inks from metals and tyre marks from road surfaces. It is formulated with a surfactant to facilitate removal of soils by washing with water after treatment.

Appearance: Pale yellow mobile liquid

Boiling point: >150 C

Flash point: >61 C

Vapour pressure at 25 C: 13kPa

Note: Under some circumstances, this product can be prone to spontaneous combustion. Rags used with the product should be placed in sealed metal containers.
